

The nycbullets package

New York City Subway route bullets

Matthew Leingang*

Released 2026-10-03

1 Introduction

This package typesets the route “bullets” of the New York City Subway:   ,  , , and so on. The artwork comes from the [New York City Subway bullets category on Wikimedia Commons](#), where nearly all of it is in the public domain (see section 3 for the exceptions). It has been compiled into a family of OpenType color fonts, one per set of bullets on Commons, plus one font containing all of them.

2 Usage

Load the package with Lua^LTeX:

```
\usepackage{nycbullets}
```

`\nycbullet` `\nycbullet[options]{key}`

Typesets the bullet named *key* from the current set. The *options* are any of the options of `\nycbulletsetup`, applied to this bullet only; as a shortcut, an option that is just the name of a set selects that set, so `\nycbullet[helvetica]{F}` gives the Helvetica-set .

A *key* names the route, followed by modifiers and variants:

- The route itself: F, 7, SIR, JFK, 10, or – for the dash bullet.
- A lower-case d for the diamond (express) form: Fd , 6d . A few R32 “special” forms add an s: Bs, Bsd.
- Variants, introduced by a dot: colors such as M.brown , historical routings such as B.broadway, years such as AA.1967–1979, and so on.

*mpl5@nyu.edu

The complete list of keys in each set is in section 4. An unknown key is an error.

`\nycbulletsetup` `\nycbulletsetup{⟨key=value list⟩}`

Sets options for all following bullets in the current group. The same options can be given when loading the package.

set=⟨name⟩ The bullet set to use. The sets are `std` (or `standard`), `helv` (helvetica), `nycta`, `r62a`, `r32`, `retired`, `legacy`, and `all`. The default is `std`.

scale=⟨number⟩ Size of the bullets relative to the current font size. The default, 1, makes a circular bullet 0.8 em across, a little taller than a capital letter.

raise=⟨dimension⟩ Shift the bullets up (or down, if negative). The default is 0pt: circular bullets then extend 0.1 em below the baseline.

color=true|false Whether to use the colored glyphs (the default) or the monochrome outlines.

renderer=node|harfbuzz Which luaotfload shaper to use. Both render the bullets in color.

The `color` and `renderer` options take effect when a set's font is first used, so set them in the preamble.

`\nycbulletfont` `\nycbulletfont[⟨set⟩]`

Switches to the bullet font of a set, for typing keys directly. The keys are ligatures in the font, so `{\nycbulletfont F Fd SIR}` gives   . Characters that are not part of a key come out as empty boxes. Separate adjacent bullets with spaces: “AC” is not the same as “A C”.

2.1 Engines

The bullets are in color only with `LuaATEX`, which renders the fonts' COLR table. With `XeATEX` the package works, but the bullets come out in a single color (the current text color), because `XeTEX` does not support color fonts. `pdfATEX` cannot use the fonts at all.

2.2 Using the fonts elsewhere

The fonts `NYCSubwayBullets-*.ttf` can be installed and used in any application. Besides the COLR table they have an SVG color table (for Safari, macOS and Adobe applications) and monochrome outlines (as a fallback). Each bullet can be typed as its key, provided the application applies standard ligatures, or as its Private Use Area code point, which is listed in the tables below.

3 Credits

The bullet artwork comes from Wikimedia Commons. Nearly all of it is the work of the Metropolitan Transportation Authority and is in the public domain. These bullets are used under licenses that require attribution:

5.4 Declaring sets and keys

These are used by the generated files `nycbullets-sets.def` and `nycbullets-(set).def`.

```
\nycbullets_declare_set:nnn \nycbullets_declare_set:nnn {<id>} {<name>} {<font file>}
```

```

39 \cs_new_protected:Npn \nycbullets_declare_set:nnn #1#2#3
40 {
41   \prop_gput:Nnn \g__nycbullets_sets_prop {#1} {#3}
42   \prop_gput:Nnn \g__nycbullets_alias_prop {#1} {#1}
43   \prop_gput:Nen \g__nycbullets_alias_prop { \str_lowercase:n {#2} } {#1}
44   \seq_gput_right:Nn \g__nycbullets_names_seq {#1}
45   \prop_new:c { g__nycbullets_keys_#1_prop }
46   \bool_new:c { g__nycbullets_loaded_#1_bool }
47 }

```

(End of definition for `\nycbullets_declare_set:nnn`. This function is documented on page ??.)

```
\nycbullets_declare_keys:nn \nycbullets_declare_keys:nn {<id>} { {<key>} {<hex code point>} ... }
```

```

48 \cs_new_protected:Npn \nycbullets_declare_keys:nn #1#2
49 {
50   \bool_set_false:N \l__nycbullets_pending_bool
51   \tl_map_tokens:nn {#2} { \__nycbullets_declare_key:nn {#1} }
52 }

```

`\tl_map_tokens:nn` hands over one braced item at a time, so keys and code points alternate: we remember each key until its code point arrives.

```

53 \tl_new:N \l__nycbullets_pending_key_tl
54 \bool_new:N \l__nycbullets_pending_bool
55 \cs_new_protected:Npn \__nycbullets_declare_key:nn #1#2

```

(End of definition for \nycbullets_declare_keys:nn. This function is documented on page ??.)

```

67 \file_input:n { nycbullets-sets.def }

```

5.5 Loading a set

`\__nycbullets_resolve_set:n` Set `\l__nycbullets_id_tl` to the id of the set named #1, or raise an error and fall back to the first set.

```

68 \cs_new_protected:Npn \__nycbullets_resolve_set:n #1
69 {
70   \prop_get:NxNF \g__nycbullets_alias_prop { \str_lowercase:n {#1} } \l__nycbullets_
71   {
72     \msg_error:nne { nycbullets } { unknown-set } {#1}
73     { \seq_use:Nn \g__nycbullets_names_seq { ,~ } }
74     \tl_set:Nx \l__nycbullets_id_tl { \seq_item:Nn \g__nycbullets_names_seq { 1 } }
75   }
76 }

```

(End of definition for __nycbullets_resolve_set:n.)

`\__nycbullets_load:V` On first use of a set, read its key table. This may happen inside a group, so everything it defines is global. We make sure % is a comment character, which it isn't in (for instance) \DocInput, and that line ends are ignored, so the file can't end the paragraph.

```

77 \cs_new_protected:Npn \__nycbullets_load:n #1
78 {
79   \bool_if:cF { g__nycbullets_loaded_#1_bool }
80   {
81     \group_begin:
82       \char_set_catcode_comment:N \%
83       \char_set_catcode_ignore:n { 13 }
84       \file_input:n { nycbullets-#1.def }
85     \group_end:
86     \bool_gset_true:c { g__nycbullets_loaded_#1_bool }
87   }
88 }
89 \cs_generate_variant:Nn \__nycbullets_load:n { V }

```

(End of definition for __nycbullets_load:V.)

`\_nycbullets_declare_font:nn` Declare the font family `\@@_font_<id>:.` With LuaTeX the colr feature turns on the color layers.

```

90 \cs_new_protected:Npn \_nycbullets_declare_font:nn #1#2
91 {
92   \clist_clear:N \l__nycbullets_features_clist

108 }
109 \clist_new:N \l__nycbullets_features_clist

```

(End of definition for `\__nycbullets_declare_font:nn`.)

The font families are declared at the start of the document, after any `\nycbulletsetup` in the preamble. (`\newfontfamily` defines its command locally, so it cannot wait for the first bullet, which is typeset in a group.) Declaring a family does not load the font.

```

5.7 User commands

`\nycbullets_codepoint:nn` The (hexadecimal) code point of key #2 in set #1 (an id or alias), or nothing. Expandable; the set must have been used already.

```

The set id is passed as an argument here so that it can be part of control sequence names: in `\ExplSyntaxOn`, `\l_@@_id_tl _prop` would be read as a single name.
